**GENERAL INFORMATION**

- Explanatory Notes
- Glossary
- Footnotes
- List of References
- Composition of Statistical Divisions and Subdivisions
- Composition of Tourism Regions

This Regional Profile presents a statistical summary of key economic and social information for your specified region in South Australia.

It brings together a wide range of existing ABS as well as some non-ABS data and has been designed to assist users of regional statistics to understand the composition and structure of a region, to understand how a region contributes to the State's economy and to monitor the trends of economic growth or decline.

The Profile includes data on a range of economic and social indicators and is divided into four sections;

- a set of time series indicators,
- a set of detailed tables,
- a set of area comparison indicators,
- a set of supplementary tables covering the Australian Business Register, Small Business Statistics, Tourist Accommodation, Household Expenditure, and
- the Manufacturing Industry (if applicable).

The time series and area comparison sections include indicators on Population, Births and deaths, Labour force, Income support customers, Taxable income, Building approvals, Property sales, Manufacturing, Agriculture, Local government finance and Motor vehicle registrations. The detailed tables section includes more detailed information about most of these indicators, as well as other data.

The last section contains the Australian Business Register Supplement, Regional Small Business Statistics, general Household expenditure and Tourist accommodation data and, if applicable, some supplementary Manufacturing industry data. These may not be available for your specified region but have been included for the best available geographic areas. This at least provides some indication of the average household expenditure and the levels of the tourism and manufacturing industries in and around your region.

The data presented have been sourced from a wide variety of statistical collections. Care should be taken when analysing the data as time periods, definitions, scope, coverage and methodologies may differ. Some concepts and definitions are covered in the Explanatory Notes and Glossary, however, more detailed information can be obtained from the relevant source publications. A list of references is included at the back of this Profile.

A Regional Profile can be produced for standard ABS geographic areas such as Local Government Areas (LGAs), Statistical Local Areas (SLAs), Statistical Subdivisions (SSDs) and Statistical Divisions (SDs) or any combinations of these areas.

All data presented have been calculated on SLA boundaries as at 30 June 2001 (ie 1997 data are shown for the boundary current at 30 June 2001). Where boundary changes have occurred or data have been collected for different spatial areas such as postcodes, concordances have been used to 'convert' the data to the specified region's boundary at 30 June 2001.

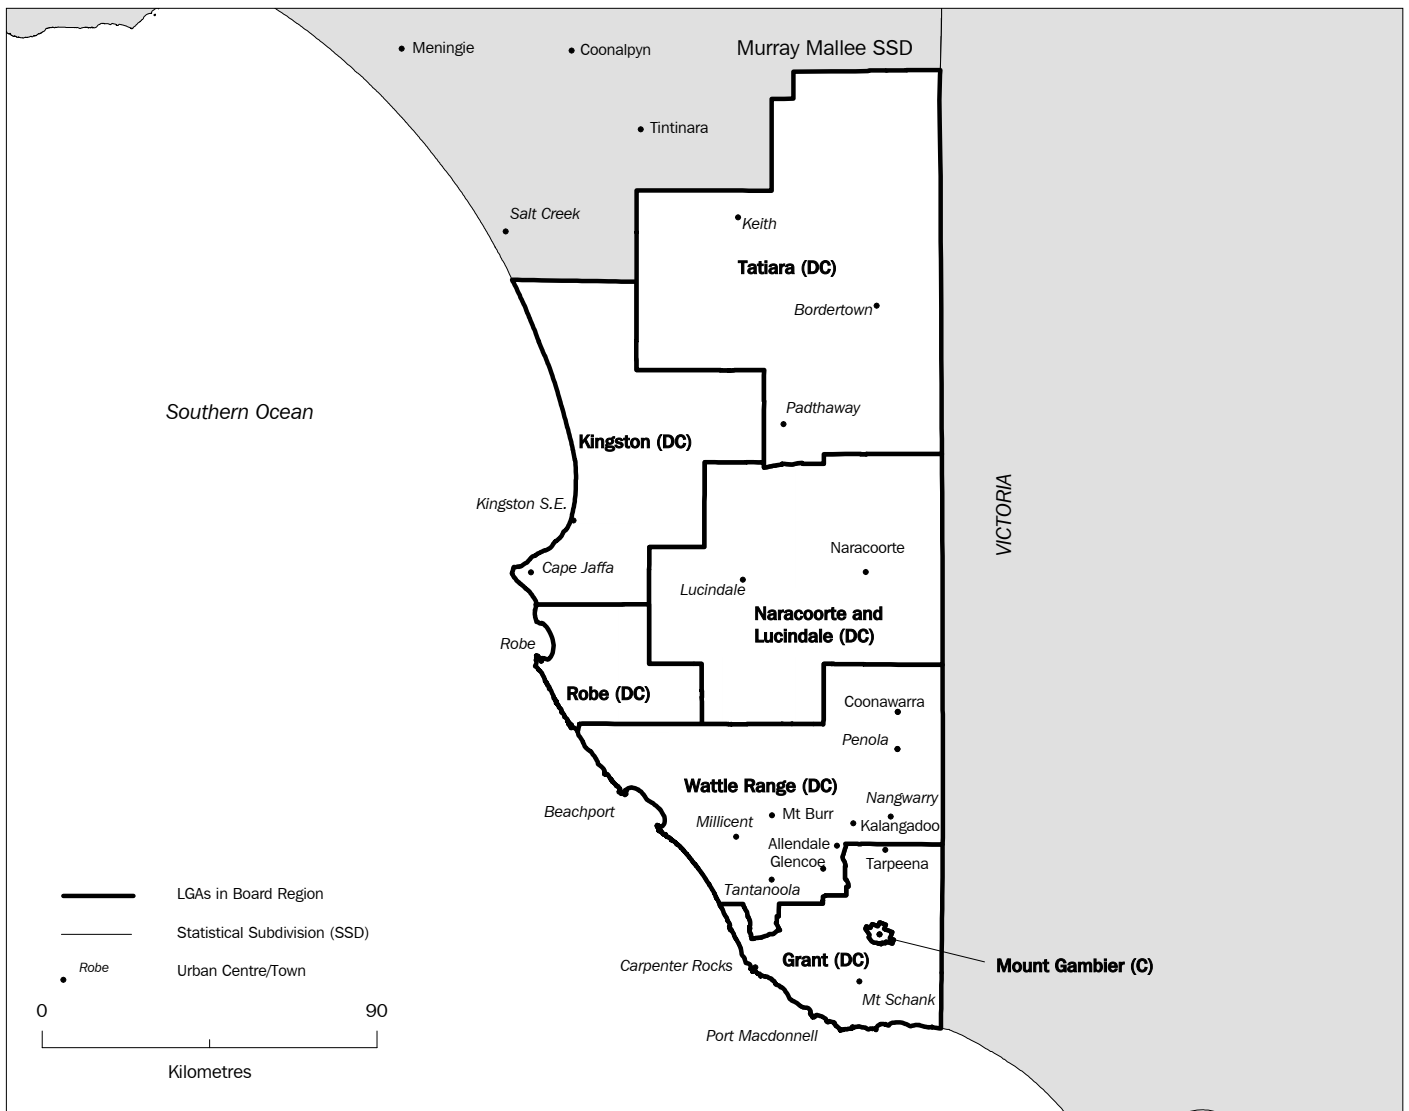

Please note that for some boundary changes an LGA may have been split into several SLAs. For the SLAs which do not equate to a whole Local Government Area, an attempt has been made to prorate past data across the SLAs which make up the LGA. While this produces distinct numerical estimates for data items, any rates or percentages will be identical for each SLA in the LGA (as these will be equivalent to the original rate for the whole LGA).
